## Availability of STATA and SPSS at the University of Hamburg

Dear Students,

In case you need the software SPSS and/or STATA for your seminar/bachelor/master thesis, the University of Hamburg offers you several possibilities for free access to the software. We would like to present those to you here.

You need a UHH ID, which you normally already have and for example use for your STiNE account. You can find more details here: <https://www.rrz.uni-hamburg.de/passwort-ken-nung.html>

### 1. STATA or SPSS on your own computer (Windows, MAC OS and Linux) via the software offer of the Regional Computer Centre (RRZ)

The freely accessible software offered by the Regional Computer Centre offers various possibilities of how STATA or SPSS can be used from your own computer. Detailed instructions for procurement, installation and use can be found on the respective websites.

If you still have problems with procurement, installation, etc., the Computer Centre for technical support has competent personnel who can provide targeted assistance with questions about use.

- SPSS network license:  
Via VPN connection SPSS can be used from your own computer on the servers of the RRZ. The program is installed locally on the own computer, but an internet connection is always required for use.  
<https://www.rrz.uni-hamburg.de/services/software/software-thematisch/statistik/spss-netzlizenz.html>

- SPSS network license offline:  
The program is installed locally on the own computer. The period of use is initially limited to seven days. After the seven days have elapsed, the user license can be easily extended for another seven days.  
<https://www.rrz.uni-hamburg.de/services/software/software-thematisch/statistik/spss-netzlizenz/spss-netzlizenz-offline.html>
- STATA network license:  
Via VPN connection and the installation of a Novell client, STATA can be used from your own computer on the servers of the RRZ. An internet connection is always required for this purpose.  
<https://www.rrz.uni-hamburg.de/services/software/software-thematisch/statistik/stata.html>

## 2. STATA or SPSS on a university computer of the public PC pools

These are publicly accessible PC workstations on which both STATA and SPSS are available. They can only be used during the respective opening hours and must be coordinated with any courses taking place there.

- Regional Computer Centre (RRZ):  
<https://www.rrz.uni-hamburg.de/services/computerarbeitsplaetze.html>
- WISO (VMP 5 / VMP 9):  
<https://www.rrz.uni-hamburg.de/services/computerarbeitsplaetze/oeffentlich/cip-pools-wiso.html>
- SUB – State and University Library:  
<http://www.sub.uni-hamburg.de/service/lernen-arbeiten/computer-arbeitsplaetze.html>

### For special cases there is the following offer:

- A Computer at Moorweidenstraße 18 (primarily for working with special software for which there are no network licenses at the University of Hamburg):

If you need software for your work that is not available through the options mentioned under points 1 and 2, a single PC is available on site, on which the special software is either already available or - in consultation with the supervisor of your work - can be installed. This computer is also available for other students, but the above-mentioned students have priority.
