Purpose and Objectives

Global and interconnected supply chains of companies in manufacturing and distribution industries have an immense impact on the requirements for supply chain planning. Intelligent algorithms for customer demand prediction and the optimization of inventory and production capacity across a network of warehouses and production sites are core components of state-of-the-art software applications. Innovative methods such as demand-driven planning or machine learning are becoming increasingly important. To meet our customers' requirements for intelligent planning and user-friendly tools, SAP Integrated Business Planning (IBP) and S/4 HANA provide an integrated set of supply chain planning and logistics processes.

We support our customers in all stages of implementation projects including decision-making, process design, solution conception, software architecture definition, productive implementation and subsequent follow-up and optimization. It is one of our main targets to ensure project success and a smooth transformation to innovative processes and software applications.

Are you interested in combining supply chain planning with new technologies and would like to develop and optimize processes and software solutions together with our customers?

We are looking for highly motivated people who enjoy understanding and implementing supply chain processes and new technologies, and who reinforce our experienced consulting team

Expectations and Tasks

We are looking for an Associate Consultant with a focus on supply chain planning. The candidate should have a good understanding of supply chain planning processes

Typical tasks:

- Support of our clients in defining and optimizing planning processes in one or more of the above areas of supply chain planning
- Implementation of SAP IBP or SAP S/4 HANA according to customer-specific requirements including integration into the system landscape
- Preparation and execution of customized system demos and proof of concepts
- Conceptual design and implementation of best practice processes
- Customer presentations and workshops

Education and Qualifications / Skills and Competencies

- Very good college or university degree
- Preferred field(s) of study: Information Systems, Business IT, Software Engineering preferably with specialization in Supply Chain, Optimization, Advanced Planning, Operations Research, Statistical Methods or Logistics
- First experience with supply chain planning
- Experience with SAP Software, e.g. SAP IBP, APO, S4 HANA or ERP logistics
- Very good German and English skills

Work Experience

- First experience preferable
